## MODULE IT HELPDESK

The IT Asset Management module provides all the modern functionality of a help desk system. Using a "people centric" approach to work flow, the system manages IT activities from the Web Browser based requests, to tracking and posting to history the events of the job.

IT Help Desk module provides:

- › Event reporting
- › Asset Management
- › Labor Management
- › Work Flow processing
- › Automatic Notification of work requests
- › Work Routing

... and much more!
